To: W. Randy Smith, Vice Provost, Office of Academic Affairs
 From: Terry L. Gustafson, Special Assistant to the Executive Dean for Semester Conversion
 Re: Arts and Sciences Program Proposals from the Natural and Mathematical Sciences Division

Arts and Sciences is pleased to submit the following programs from the Natural and Mathematical Sciences Division to the Office of Academic Affairs for conversion from quarters to semesters. The programs have been approved by the faculty members and chair of the originating unit, and reviewed and approved by the divisional advisory panel, a subcommittee of the ASC Committee on Curriculum and Instruction (CCI), and the full CCI. The vote for approval of all programs at the full CCI was unanimous.

Program Name	Academic Plan Code	Conversion Designation	CCI Approval	Last Revision
Chemistry BS	CHEM-BS	Converted	6/10/2011	Prior to 2006
Chemistry BA	CHEM-BA	Converted	6/10/2011	Prior to 2006
Earth Sciences BS	EARTHSC-BS	Re-envisioned	6/10/2011	Prior to 2006
Evolutionary Studies Minor	EVOSTDS-MN	Converted	6/10/2011	Prior to 2006
Molecular Genetics BA	MOLGEN-BA	Deactivated	6/10/2011	Prior to 2006
Plant Cellular and Molecular Biology BA	PCMB-BA	Deactivated	6/10/2011	Prior to 2006

Arts and Sciences General Education (GE) Program: The GE program for untagged B.A. and B.S. degrees in Arts and Sciences was approved by the Council on Academic Affairs on May 26, 2010, after receiving approval from the Arts and Sciences Faculty Senate. All the programs presented here follow the approved GE program.

College of Arts and Sciences Transition Policy: The College of Arts and Sciences is committed to the principles outlined in the university's Pledge to Undergraduate Students. Each unit has a plan on how best to assist its majors and minors through the transition. And the Arts and Sciences Academic Advising Services will advise students on how to transition their GE program. Dual advising is the existing process used in Arts and Sciences and will continue under semesters.

Fiscal Unit/Academic Org	Chemistry - D0628
Administering College/Academic Group	Arts And Sciences
Co-administering College/Academic Group	
Semester Conversion Designation	Converted with minimal changes to program goals and/or curricular requirements (e.g., sub-plan/specialization name changes, changes in electives and/or prerequisites, minimal changes in overall structure of program, minimal or no changes in program goals or content)
Current Program/Plan Name	Chemistry
Proposed Program/Plan Name	Chemistry Bachelor of Science major
Program/Plan Code Abbreviation	CHEM-BS
Current Degree Title	Bachelor of Science

Credit Hour Explanation

Program credit hour requirements		A) Number of credit hours in current program (Quarter credit hours)	B) Calculated result for 2/3rds of current (Semester credit hours)	C) Number of credit hours required for proposed program (Semester credit hours)	D) Change in credit hours
Total minimum credit hours required for completion of program		58	38.7	42	3.3
Required credit hours offered by the unit	Minimum	50	33.3	37	3.7
	Maximum	58	38.7	42	3.3
Required credit hours offered outside of the unit	Minimum	0	0.0	0	0.0
	Maximum	10	6.7	8	1.3
Required prerequisite credit hours not included above	Minimum	55	36.7	37	0.3
	Maximum	55	36.7	37	0.3

Program Learning Goals

Note: these are required for all undergraduate degree programs and majors now, and will be required for all graduate and professional degree programs in 2012. Nonetheless, all programs are encouraged to complete these now.

Program Learning Goals

- 1. Students solve state-of-the-art chemistry problems, working both individually and in groups, and these problems will exemplify current disciplinary and interdisciplinary principles as well as modern pedagogical practice.
- 2. Students develop effective skills in oral and written communication of scientific knowledge.
- 3. Students plan experimental procedures, carry out chemical procedures, use laboratory equipment, analyze data and prepare laboratory reports that reinforce current chemical practices.
- 4. Students follow safe practices in the laboratory and demonstrate scientifically ethical practices.
- 5. Students retrieve information from the chemical literature, and become proficient in online database searching.
- 6. Students use modern computer software for graphing, manipulation of symbolic mathematical expressions, and quantum chemical calculations.

Assessment

Assessment plan includes student learning goals, how those goals are evaluated, and how the information collected is used to improve student learning. An assessment plan is required for undergraduate majors and degrees. Graduate and professional degree programs are encouraged to complete this now, but will not be required to do so until 2012.

Is this a degree program (undergraduate, graduate, or professional) or major proposal? Yes

Status: PENDING

PROGRAM REQUEST
Chemistry Bachelor of Science major

Last Updated: Andereck, Claude David
06/08/2011

Does the degree program or major have an assessment plan on file with the university Office of Academic Affairs? Yes

Summarize how the program's current quarter-based assessment practices will be modified, if necessary, to fit the semester calendar.

No modifications are planned or required to fit the semester calendar.

Program Specializations/Sub-Plans

If you do not specify a program specialization/sub-plan it will be assumed you are submitting this program for all program specializations/sub-plans.

Pre-Major

Does this Program have a Pre-Major? No

To: Larry Krissek, Chair, Committee on Curriculum and Instruction(CCI)
From: James Fredal, Chair, CCI Sciences Subcommittee
Re: Chemistry BS Degree Semester Conversion Proposal
Date: April 26, 2011

Larry:

The Sciences subcommittee of the CCI met on Monday, April 25 to review the BS degree program in Chemistry and approved the proposal unanimously contingent upon the following changes and corrections.

First, we requested that the PACER numbers be reviewed. The maximum required credit hours offered outside the unit are listed as 8, but should perhaps be 5. The other numbers appear to be correct but were difficult to check because of the format of the course list, which lists several versions of each required sequence and doesn't offer clear totals for prerequisite courses, required courses, and electives. Also, many of the courses are listed as re-envisioned but are not listed with their quarter equivalents. These quarter courses should be added.

The difficulty of checking PACER was compounded by the placement of the four-year plans and the format of the advising sheet. The latter does not offer course hour totals for required courses, electives, or prerequisites. Perhaps these totals could be added in the appropriate places. We also request that the four-year plans be moved to the bottom of the document to aid comparisons between the PACER chart, the course list, and the semester advising sheet.

Finally, the Transition plan, while quite complete, seemed very general in regards to bridge courses: what bridge courses would be needed and offered, when and for how long. Also, the final sentence was somewhat dense. It alludes to enrollment increases, upon which transition plans seem to depend. The committee felt that this should either be explained further and clarified, or the sentence dropped.

Since these are largely corrections and format issues, we did not feel the changes were substantial enough to merit returning the document to the originating unit, so we forward the proposal to the full CCI with a recommendation for approval, with the understanding that these and any further corrections will be made before the document goes forward.

Thanks very much,

Jim Fredal

April 19, 2011

Larry Krissek
Chair, Arts and Sciences CCI

Dear Larry:

It is a pleasure to forward to you the proposal for the Bachelor of Science in Chemistry under semesters. The program has been converted with some small changes. There have been revisions to the laboratory courses, the most important being to allow students to take the organic chemistry laboratories concurrently with the lectures. A second change has been the decision to offer a version of the organic chemistry sequence for majors, in addition to the standard and honors versions—this had already occurred for the introductory sequence.

Beyond my own review of the documents, the proposal has been discussed by colleagues from other NMS units at a meeting on April 5, 2011. Feedback from these discussions has been incorporated in the proposal.

If you have any questions, I would be happy to address them.

Sincerely,

David Andereck

To: University Semester Conversion Committees

Re: Conversion of Undergraduate Major (B.A. and B.S.) and Minor Programs in Chemistry

The Department of Chemistry currently offers a Bachelor of Arts (BA) and a Bachelor of Science (BS) degree as part of our majors program, along with a minor in Chemistry. Our currently offered majors programs prepare students for a variety of careers, with the BA degree being less intensive in required chemistry courses, thereby offering opportunities for undergraduate students to expand their schedules with interdisciplinary courses. Historically, our BA degree has been the most popular with students who are intending to pursue pre-professional programs (pre-medicine, pre-dental, pre-veterinary, pre-pharmacy, pre-optometry, pre-law, etc) or for chemistry-related employment, including sales and marketing. The BS degree requires more chemistry and mathematics courses and is better preparation for a student going off to graduate school in a chemically related discipline (chemistry, biochemistry, pharmacy, etc) or for employment in chemistry (pharmaceutical or materials chemistry). While there is some variation from year to year, there are about 450 chemistry majors across all ranks in 2011, and approximately 50% of them are intending on the BA degree while 50% are working towards the BS degree.

The American Chemical Society (ACS: www.acs.org) provides guidelines for the educational preparation for degrees in Chemistry, and the department is currently certified to comply with those guidelines. For some institutions, there are significant guidelines as to contact hours by instructors and so on; however, for a large university like Ohio State, the most important aspects of the guidelines are a minimum amount of hours (400) in the chemistry laboratory across the entire program (but excluding first-year general chemistry), a minimum exposure to laboratory experience in 4 of the 5 major areas of chemistry (analytical, biological, inorganic, organic and physical) as well as lecture instruction in all 5 areas.

On a yearly basis, the department provides an update report to the ACS as to our current program and its requirements, and on a 5-year schedule, we re-apply for re-certification of our major programs. Thus, upon graduation, our BS majors can receive a certified ACS degree if they comply with the ACS requirements. Between 25 – 50% of our BS majors per year receive ACS certified degrees.

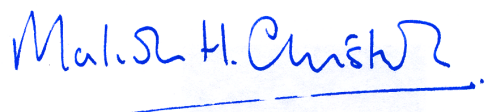

Our program continues to grow, with approximately 200% more chemistry majors as new first quarter freshmen (NFQFs) in autumn 2010 as compared to a typical number of 35–40 incoming students in the 1990s.

The process for the conversion of our undergraduate major and minor programs began in summer 2010 with many discussions with our faculty and teaching staff. The courses were discussed at numerous meetings of the faculty at large as well as the Undergraduate Curriculum Committee, chaired by the Vice Chair for Undergraduate Studies (Christopher Hadad). On December 10, 2010, the Undergraduate Curriculum Committee unanimously voted to adopt the envisioned programs presented here for the revised undergraduate programs under semesters. Then, the faculty voted on the same programs at a January 19, 2011 faculty meeting and voted 25 in favor, 0 against and 0 abstain to adopt these revisions to our programs.

The details of these revised programs are provided in the accompanying documentation.

If you have any questions, please contact Christopher Hadad at (614) 292–1204 or hadad.1@osu.edu.

Sincerely,

Malcolm H. Chisholm
Chair and Distinguished University Professor
Department of Chemistry

Christopher M. Hadad
Vice Chair for Undergraduate Studies
Department of Chemistry

Program Rationale Statement (Bachelor of Science degree in Chemistry)

The revised program for the Bachelor of Science (BS) degree in Chemistry is a relatively straightforward conversion of our existing BS degree under quarters. Our learning goals and outcomes have been abbreviated in terms of language as compared to the current assessment plan; however, the goals are relatively invariant.

Approximately half of our current majors are working towards the BS degree. We maintain core experiences in general, analytical, organic, inorganic and physical chemistry. Exposure to biochemistry is strongly encouraged and would fulfill an advanced science elective (shown as a course in the third year). Advanced science electives can be fulfilled by pre-professional students who require a specific course in biochemistry. Relative to our BS degree under quarters, we continue to require similar content in mathematics (through linear algebra and differential equations, Math 2174) and a year of physics (1250–1251).

The most significant changes to our program relate to our laboratory courses. Many of our laboratory courses (for example, analytical, inorganic and physical chemistry courses) were one-quarter offerings, and these quarter offerings are now expanded to one-semester courses (analytical: 2210; physical: 4410; inorganic: 4550). Our organic laboratory courses were two-quarter sequences (254–255), but previously required a pre-requisite one-quarter lecture course (251). With semesters, we cannot require this pre-requisite lecture course, and our semester organic lab offerings (2540–2550) must be offered concurrent with lecture (2510–2520 or 2610–2620 or 2910H–2920H). Thus, these lab offerings had to be adjusted in terms of our current two 3-hour (or 4-hour) lab meetings per week to be only one 3-hour (or 4-hour) lab meeting per week. Overall, our new semester plan is commensurate with semester offerings by peer institutions.

The American Chemical Society provides guidelines for an ACS certified degree. Specifically, to be certified, the student should have a minimum amount of hours in laboratory courses (beyond general chemistry) and be exposed to all areas of chemistry (analytical, biological, inorganic, organic and physical) in a lecture format and also have a laboratory experience in at least 4 of the 5 areas. Thus, if a BS chemistry major follows our suggested course sequences and takes biochemistry as an elective, they will have the correct breadth of lecture (5) and laboratory (4) experiences as well as the minimum laboratory hours (400) to obtain a BS degree certified by the ACS. Moreover, a chemistry research experience (4998/4999 as well as the honors variants) can complement the course-based laboratory hours for ACS certification.

Research remains a highly recommended and encouraged science elective.

Another change is an extension of our current effort to have a majors-only version of our high-enrollment courses. Until only recently, our Chemistry majors have been able to take our Honors sequence (201H–202H–203H) or the regular sequence (121–122–123) of general chemistry. In 2009, we created a new general chemistry sequence for chemistry (and biochemistry) majors: 161–162–163. These options have been maintained for general chemistry under semesters (honors, majors-only, and regular sequences). Organic chemistry has been a similar challenge with our 100+ chemistry majors immersed in a sea of 1500+ (predominantly pre-professional)

students. While Honors organic chemistry was an option, there was no majors-only version of organic chemistry. For semesters, we have created a 2610–2620 organic sequence for chemistry (and biochemistry) majors, along with retention of our honors (2910H–2920H) and regular (2510–2520) sequences. We anticipate that content of pertinent relevance to chemistry (and biochemistry) majors will be provided in the majors-only sequence (for example, state-of-the-art methodologies in carbon-carbon bond-forming reactions as well as asymmetric and catalytic processes).

We do not have specializations or subprograms for our BS degree; instead, from one-on-one discussions between the undergraduate student and our chemistry advisors, we create the ideal program of courses that will cater to the specific interests of the student. For example, a chemistry major who plans to go to graduate school in organic chemistry would be advised to take some additional courses above 5000 level in organic chemistry prior to graduation. Those 5000-level courses would count as advanced science electives in the senior year.

With regard to the four-year plan, the Bachelor of Science curriculum is designed for students seeking to become professional chemists. Chemistry 1610 – 1620 is the recommended general chemistry sequence for chemistry majors who present high school chemistry for entrance, although qualified students are strongly urged to take the honors general chemistry sequence, Chemistry 1910H – 1920H, instead. (Chemistry 1210 – 1220 are acceptable, but are not the preferred sequence for chemistry majors.)

Chemistry 1620 or 1920H is followed by Organic Chemistry and Quantitative Analysis 2210 (or 2210H) in the second year. As with general chemistry, Chemistry 2610 – 2620 is the recommended organic chemistry lecture sequence for chemistry majors, although qualified students are strongly urged to take the honors sequence, Chemistry 2910H – 2920H, instead. (Chemistry 2510 – 2520 are acceptable, but are not the preferred organic lecture sequence for chemistry majors.) The Organic Chemistry lab experience is either the 2540 – 2550 sequence or the honors version (2940H – 2950H).

Physical Chemistry 4300 – 4310; Physical Chemistry Laboratory 4410; Instrumental Analysis 4870; and Inorganic Chemistry 3510 are taken in the third year. The laboratory component on Instrumental Analysis (Chemistry 4880) is taken in the fourth year. An advanced lab, Undergraduate Research (Chemistry 4998/4999), Honors Research (Chemistry 4998H/4999H), or Biochemistry 4511 is taken in the fourth year or earlier.

The major is completed with 6 hours of advanced science electives, which must include at least three hours of chemistry courses. Advanced science electives must be approved by the undergraduate chemistry advisors. Examples of some approved science electives include: Chemistry 4998/4999 and any un-required graded 5000 or 6000 level courses in Chemistry; any 4000 or 5000 level course in Physics; Biochemistry 4511; most 4000 or 5000 level courses in Mathematics. Not more than six hours of Chemistry 4998/4999 (or honors versions) may be used to fulfill requirements of the major. Students who wish to receive a degree certified by the American Chemical Society should include Biochemistry 4511 (4 credit hours) and an advanced lab experience in Inorganic Chemistry (4550, 2 credit hours) or Biochemistry (5621, 4 credit hours) in their course choices for the major.

While we show a typical sequence of courses, we will offer many of these course offerings in both the autumn and spring quarters so that students can adjust their schedules for their particular needs. We anticipate that an undergraduate student who starts with general chemistry in their first year will have little difficulty in graduating in 4 years under semesters.

The Bachelor of Science Degree in Chemistry (B.S.)

The Bachelor of Science curriculum is designed for students seeking to become professional chemists. Chemistry 1610 – 1620 is the recommended general chemistry sequence for chemistry majors who present high school chemistry for entrance, although qualified students are strongly urged to take the honors general chemistry sequence, Chemistry 1910H – 1920H, instead. (Chemistry 1210 – 1220 are acceptable, but are not the preferred sequence for chemistry majors.) Chemistry 1620 or 1920H is followed by Organic Chemistry and Quantitative Analysis 2210 (or 2210H) in the second year. As with general chemistry, Chemistry 2610 – 2620 is the recommended organic chemistry lecture sequence for chemistry majors, although qualified students are strongly urged to take the honors sequence, Chemistry 2910H – 2920H, instead. (Chemistry 2510 – 2520 are acceptable, but are not the preferred organic lecture sequence for chemistry majors.) The Organic Chemistry lab experience is either the 2540 – 2550 sequence or the honors version (2940H – 2950H). Physical Chemistry 4300 – 4310; Physical Chemistry Laboratory 4410; Instrumental Analysis 4870; and Inorganic Chemistry 3510 are taken in the third year. The laboratory component on Instrumental Analysis (Chemistry 4880) is taken in the fourth year. An advanced lab, Undergraduate Research (Chemistry 4998/4999), Honors Research (Chemistry 4998H/4999H), or Biochemistry 4511 is taken in the third or fourth year or earlier. The major is completed with **6 hours of advanced science electives**, which must include **at least three hours of chemistry courses**. Advanced science electives must be approved by the undergraduate chemistry advisors. Examples of some approved science electives include: Chemistry 4998/4999 and any un-required graded 5000 or 6000 level courses in Chemistry; any 4000 or 5000 level course in Physics; Biochemistry 4511; most 4000 or 5000 level courses in Mathematics. Not more than six hours of Chemistry 4998/4999 (or honors versions) may be used to fulfill requirements of the major. Students who wish to receive a degree certified by the American Chemical Society should include Biochemistry 4511 (4 credit hours) and an advanced lab experience (or research) in Inorganic Chemistry (4550, 2 credit hours) or Biochemistry (5621, 4 credit hours) in their course choices for the major. A **sample curriculum** for semesters is given below. Your advisors will work with you to design your ideal curriculum. Check with your chemistry advisor to design a schedule for your chemistry, math, physics, and other science courses.

Autumn Semester (Year 1)		Spring Semester (Year 1)	
General Chemistry 1 (1910H, 1610, 1210)	5	General Chemistry 2 (1920H, 1620, 1220)	5

Total Hours: _____

1. You must earn at least a C- in a course in order for it to be listed on your major. However, you must achieve a 2.00 cumulative point-hour ratio for all major course work. If you earn a D+, D, or an E in a course on your major program, the course cannot be counted toward the major. Your chemistry advisor will decide whether you should repeat the course, delete the course from your major, or substitute another course. Courses taken on a pass/non-pass basis may not be used on the major.
2. Elective courses are chosen in consultation with your chemistry advisor. All courses comprising your major must be approved in writing by your chemistry advisor on a form sent to the office of the College of the Arts and Sciences. Changes in your major program may be made only with the written approval of your chemistry advisor. They must be filed in the Arts and Sciences office at the time approval is given.

Courses required to support the major:

General Chem 1 1210 (5) _____ or 1610 (5) _____ or 1910H (5) _____
 General Chem 2 1220 (5) _____ or 1620 (5) _____ or 1920H (5) _____
 Math 1151 (5) _____ 1152 (5) _____ 2153 (4) _____ 2174 (3) _____

The Bachelor of Science Degree in Chemistry (B.S.)

The Bachelor of Science curriculum is designed for students seeking to become professional chemists. Chemistry 161, 162, and 163 is the recommended general chemistry sequence for chemistry majors who present high school chemistry for entrance, although qualified students are strongly urged to take the honors general chemistry sequence, Chemistry 201H, 202H and 203H, instead. (Chemistry 121, 121, and 123 are acceptable, but not the preferred sequence for chemistry majors.) Chemistry 163 or 203H is followed by Quantitative Analysis 221 (or 221H) and Organic Chemistry 251 through 255 (or 251H-255H) in the second year. Physical Chemistry 530 through 532; Physical Chemistry Laboratory 541; Instrumental Analysis 587 and 588; and Inorganic Chemistry 651 and 652 are taken in the third year. An advanced lab, Undergraduate Research Chem 699, Honors Research Chem 783H, or Biochem 521 is taken in the fourth year or earlier. The major is completed with **8 hours of advanced science electives**, which must include **at least three hours of chemistry courses**. Advanced science electives must be approved by the undergraduate chemistry advisor. Examples of some approved science electives include: Chemistry 699 and any unrequired graded 600 or 700 level courses in Chemistry; any 500 or 600 level course in Physics; Biochemistry 511; most 400 or 500 level courses in Mathematics; Chemical Engineering 520, 521, and 610. Not more than nine hours of Chemistry 699 may be used to fulfill requirements of the major. Students who wish to receive a degree certified by The American Chemical Society should include Biochemistry 511 and an advanced lab experience in Inorganic or Biochemistry in their course choices for the major. A **sample curriculum** based on the quarter system is given below. The curriculum will change when Ohio State changes to semesters in Summer 2012, although the overall curriculum content will be very similar. Your advisers will work with you to design a curriculum transition plan. You may take your GEC courses in a much different order than is shown here. Check with your chemistry advisor to design a schedule for your chemistry, math, physics, and other science courses.

<u>Autumn First Year</u>		<u>Winter First Year</u>		<u>Spring First Year</u>	
Chem 201H, 161, or 121	5	Chem 202H, 162, or 122	5	Chem 203H, 163, or 123	5

			16-18		

The GEC Social Diversity and International Issues requirements should be fulfilled by selecting courses that overlap with another GEC category, such as the Second Writing Course, Social Sciences, Arts and Humanities, and/or Historical Study. Otherwise additional credit hours may be added to the minimum required for the degree.

Bachelor of Science Chemistry Courses for Semesters

<i>Title</i>	<i>Quarter Course Number</i>	<i>Quarter Credits</i>	<i>Semester Course Number</i>	<i>Semester Credits</i>	<i>Course Information (L = lecture, R = recitation, B = lab)</i>	<i>Comments</i>
Pre-requisite Courses for B.S. Chemistry degree (choose one of the following sequences)						
General Chemistry 1	121	5	1210 1220	5	3 hr L, 1 hr R, 1 x 3 hr B 3 hr L, 1 hr R, 1 x 3 hr B	simple conversion (GEC-lab)
General Chemistry 2	122	5				
General Chemistry 3	123	5				
General Chemistry for Majors 1	161	5	1610 1620	5	3 hr L, 1 hr R, 1 x 3 hr B 3 hr L, 1 hr R, 1 x 3 hr B	simple conversion (GEC-lab)
General Chemistry for Majors 2	162	5				
General Chemistry for Majors 3	163	5				
Honors General Chemistry 1	201H	5	1910H 1920H	5	3 hr L, 1 hr R, 1 x 3 hr B 3 hr L, 1 hr R, 1 x 3 hr B	simple conversion (GEC-lab)
Honors General Chemistry 2	202H	5				
Honors General Chemistry 3	203H	5				
Required Core Chemistry Courses for B.S. Chemistry degree						
Analytical Chemistry 1: Quantitative Analysis	221	5	2210	5	3 hr L, 1 hr R, 1 x 4 hr B	simple conversion (2 x 4 hr B, qtr to 1 x 4 hr B, sem)
Honors Analytical Chemistry 1: Quantitative Analysis	221H	5	2210H	5	3 hr L, 1 hr R, 1 x 4 hr B	simple conversion (2 x 4 hr B, qtr to 1 x 4 hr B, sem)

Curriculum map for the B.A. and B.S. degrees in Chemistry

Program outcomes (*B=beginning, I=intermediate, A=advanced*)

1. Students solve state-of-the-art chemistry problems, working both individually and in groups, and these problems will exemplify current disciplinary and interdisciplinary principles as well as modern pedagogical practice.
2. Students develop effective skills in oral and written communication of scientific knowledge.
3. Students plan experimental procedures, carry out chemical procedures, use laboratory equipment, analyze data and prepare laboratory reports that reinforce current chemical practices.
4. Students follow safe practices in the laboratory and demonstrate scientifically ethical practices.
5. Students retrieve information from the chemical literature, and become proficient in online database searching.
6. Students use modern computer software for graphing, manipulation of symbolic mathematical expressions, and quantum chemical calculations.

Course	Chemistry Program Goals

Transition Policy for the Department of Chemistry

Students who begin their degree training under quarters will not be penalized as we transition to semesters. Our two chemistry advisors are available to help design the ideal program for each of our 400+ chemistry majors in order to facilitate an optimum transition.

In general, our current quarter courses are typically either a one-quarter class or a three-quarter sequence across an entire academic year. These courses will be converted to one-semester or two-semester courses, respectively.

Also, our chemistry majors and minors are typically successful in completing an entire sequence of either general or organic chemistry in the autumn-winter-spring academic year. As was evident with the various quarter and semester plans provided with this package, most sequences would normally end in the spring term of any academic year.

In general and organic chemistry, we will continue our current practice of offering multiple courses in the summer term – for example, general chemistry (121–122–123) courses are offered in each of the four quarters. We anticipate continuing these trends for general chemistry and also continuing to offer some organic chemistry in the summer session. Moreover, in the normal academic year, we will offer general and organic chemistry (1 and 2) courses in both semesters.

While we have created majors-only versions of general and organic chemistry, chemistry majors are eligible to take the Honors or the regular sequences instead of the majors-only version. Students who are off-sequence for whatever reason are not penalized in any way.

If space is available and enrollment demand is sufficiently evident, we plan on offering multiple sections of high enrollment courses in both semesters.

For advanced science electives, there will be multiple 5000-level and above courses for students to select. As our graduate program is sizeable, we will continue to offer graduate-level courses for our upper-level undergraduate students to select as electives.

There will be bridge or transition courses for general chemistry and organic chemistry for a short period of time, and these may be offered in alternate formats, including 7-week half-semester. Students who have credit for Chemistry 121–122 under quarters will be very prepared for the second semester of general chemistry (1220). Similarly, students who have credit for Chemistry 251–252 will be prepared for the second semester (Chemistry 2520). Bridge or transition courses will be available for students who have not taken the middle quarter of a three-quarter sequence in order for those students to be successful in the second semester of the sequence. These bridge courses will include the offering of Chemistry 1210 as a 6-credit hour quarter offering in spring 2012 to prepare students for semester courses that will start in summer 2012. Also, students who have credit for Chemistry 121 but are lacking the 5 weeks of course content from the beginning of Chemistry 122, will be offered a bridge course (starting in summer 2012) for the transition to the semester offering of Chemistry 1220. This bridge course will have a course instructor, lecture videos, online assessments and an in-class exam for evaluating student success.

Revisions to the Chemistry Bachelor of Science proposal

(Comments from the CCI are listed in italics.)

First, we requested that the PACER numbers be reviewed. The maximum required credit hours offered outside the unit are listed as 8, but should perhaps be 5.

After much discussion with many individuals, the minimum credit hours offered by the unit was decreased from 53 to 50, and the semester numbers were unchanged. The updated PACER table is available with the re-submission.

The other numbers appear to be correct but were difficult to check because of the format of the course list, which lists several versions of each required sequence and doesn't offer clear totals for prerequisite courses, required courses, and electives. Also, many of the courses are listed as re-envisioned but are not listed with their quarter equivalents. These quarter courses should be added.

The revised semester advising sheet lists the required courses outside of Chemistry as well as their credit hour values. Also, the list of courses has been updated to show courses at the 6000 level. Where appropriate, the corresponding quarter course has been identified – new or re-envisioned courses are noted as such.

The difficulty of checking PACER was compounded by the placement of the four-year plans and the format of the advising sheet. The latter does not offer course hour totals for required courses, electives, or prerequisites.

The location of the 4-year plans has been changed. See the revised semester advising sheet for course hour totals.

Perhaps these totals could be added in the appropriate places. We also request that the four-year plans be moved to the bottom of the document to aid comparisons between the PACER chart, the course list, and the semester advising sheet.

As requested, this has been done.

Finally, the Transition plan, while quite complete, seemed very general in regards to bridge courses: what bridge courses would be needed and offered, when and for how long. Also, the final sentence was somewhat dense. It alludes to enrollment increases, upon which transition plans seem to depend. The committee felt that this should either be explained further and clarified, or the sentence dropped.

The transition plan has been updated – see the last paragraph.

Christopher M. Hadad, Vice Chair for Undergraduate Studies, Chemistry
